

Gerrit Hoogenboom

Dr. Hoogenboom is a Professor and Preeminent Scholar of the Agricultural and Biological Engineering Department at the University of Florida. He received his PhD at Auburn University in 1985 and prior to joining UF in 2016, he served as faculty at Washington State University and the University of Georgia. Dr. Hoogenboom's research focuses on the development of crop simulation models and application of decision support systems for sustainable development, resource management, and food security. He is a core member of the Global Food Systems Institute at UF and leads the DSSAT (Decision Support System for Agrotechnology Transfer) modeling system.
